Key findings DDW vRE grid integration

- High vRE penetration is technical possible, challenges are **economic and institutional**, regulation need to keep pace with technology and market developments
- **Develop a vision of how the grid and the energy system** shall look in the future and plan accordingly so that transmission and distribution utilities can lay down the tracks and financing can be secured
- **Location and timing of future vRE installations** need to be matched with transmission and generation planning and market and regulatory design
- Flexible system operation can be achieved through **more flexible scheduling and dispatch schemes** as well as **accurate forecasting**, potentially avoiding investments in additional flexible generation resources
- As forecasting is essential, **the specific responsibilities of each entity** need to be clarified
- Get your **own experience** and learn from your neighbors
