06/26/2012

- Cutting GHG emissions by 20% (compared to 1990 levels)
- Reducing energy consumption by 20%
- Reaching a 20% share of energy from RES
- Min. 80% reduction of GHG emissions targeted by 2050

→ Smart electricity grid = key aspect to reach goals

What are KPIs?

In general

lecta

- Purpose: performance measurement
- Used in business activity monitoring
 - E.g. in construction industry, health industry, for quality regulation in electricity distribution systems,...

In a Smart Grid context

- No common view
 - SET-plan: evaluation of progress towards 2020 targets
 - EEGI: evaluation of demo projects
 - ERGEG: evaluation of regulatory incentives
- \rightarrow No clear framework exists today

- What makes an electricity system smart?
- How can this smartness be measured?

6 Characteristics

KATHOLIEKE UNIVERSITEIT

- Enable informed participation by customers
- Accommodate all generation & storage options
- Sell more than kWhs
- Provide power quality for the 21st century
- Optimize assets & operate efficiently
- Operate resiliently to disturbances, attacks & natural disasters

	cta	Enable informed participation of		KATHOLIEKE UNIVERSITEIT
		customers		
•	Categories

	Pro	sumer		

06/26/2012

Enable informed participation of customers

KPIs

clecta

Enable informed pa	articipation by customers	
Advanced Meters	1A: Number of advanced meters installed	
	1B: Percentage of total demand served by advanced meters	
Dynamic Pricing	2A: The fraction of customers served by tariffs	
Signals	2B: The fraction of load served by tariffs	
Smart Appliances	3A: Total yearly retail sales volume for purchases of smart appliances [€]	
	3B: Total load capacity in each consumer category that is actually or potentially	
	modified by behaviours of smart appliances [MW]	
Demand Side	4A: Fraction of consumers contributing in DSM [%]	
Management	4B: Percentage of consumer load capacity participating in DSM [MW/MW]	
	4C: Potential for time shift (before start-up and during operation) [h]	
Prosumer	5A: Total electrical energy locally (decentralised) produced versus total electrical	
	energy consumed [MWh/MWh]	
	5B: Minimal demand from grid (maximal own production) versus maximal demand	
	from the grid (own production is zero) [MW/MW]	
	5C: Fraction of time prosumer is net producer and consumer [h/h]

DG and storage	PHEVs
DER interconnection	

Accommodate all generation and storage options

KPIs

clecta

Accommodate all ge	neration and storage options			
Distributed	6A: Amount of production generated by local, distributed generation (MW/MW)			
Generation and	6B: Potential for direct electrical energy storage relative to daily demand for electrical			
Storage	energy [MWh _{el} /MWh _{el}]			
	6C: Indirect electrical energy storage through the use of heat pumps: time shift			
	allowed for heating/cooling [h]			
PHEVs	7A: The total number and percentage shares of on-road light-duty vehicles,			
	comprising PHEVs			
	7B: Percentage of the charging capacity of the vehicles that can be controlled (versus			
	the charging capacity of the vehicles or the total power capacity of the grid) [MW/MW]			
	7C: Percentage of the stored energy in vehicles that can be controlled (versus the			
	available energy in the vehicles or the total energy consumption in the grid)			
	[MWh/MWh]			
	7D: Number of charging points that are provided to charge the vehicles			
DER Interconnection	8A: The percentage of grid operators with standard distributed resource			
	interconnection policies

06/26/2012

Sell more than kWhs

KPIs

clecta

Sell more than kWh	S			
New Energy Services	9A: Number of customers served by ESCO's			
0,	9B: Number of additional energy services offered to the consumer			
	9C: Number of kWh that the consumer saves in comparison to the consump	tion		
	before the energy service			
Flexibility	10A: The number of customers offering flexibility to aggregators			
	10B: The flexibility that aggregators can offer to other market players [MWh]			
	10C: The time that aggregators can offer a certain flexibility [h]			
	10D: To what extent are storage and DG able to provide ancillary services as a			
	percentage of the total offered ancillary services			
	10E: Percentage of storage and DG that can be modified vs. total storage and	DG		
	[MW/MW]			
Customer Choice	11A: Number of tariff plans available to end consumers			
Support Mechanisms	12A: The average percentage of smart grid investment that can be recovered thro	ough		
	rates or subsidies			
	12B: The percentage of smart grid investment covered by external financing			
Interoperability	13A: The weighted average maturity level of interoperability realised am	iong		
Maturity Level	electricity system stakeholders

06/26/2012

Provide power quality for the 21st century

KPIs

clecta

Optimise assets and	l operate efficiently
T&D Automation	17A: Percentage of substations applying automation technologies
Dynamic Line Rating	18A: Number of lines operated under dynamic line ratings
	18B: Percentage of kilometres of transmission circuits operated under dynamic line
	ratings [km]
	18C: Yearly average transmission transfer capacity expansion due to the use of
	dynamic (versus fixed) line ratings [MW-km]
Capacity Factors	19A: Yearly average and peak generation capacity factor (%)
	19B: Yearly average and average peak capacity factor for a typical kilometer of
	transmission line (%-km per km)
	19C: Yearly average and average peak distribution transformer capacity factor (%)
Efficiencies	20A: Efficiency of generation facilities [energy output (MWh) / energy input (MWh)]
	20B: Energy losses in transmission and distribution [MWh/year]
