ASSISTING COUNTRIES WITH CLEAN ENERGY POLICY

# Overview of the expert

Factor is an international group, specialized in providing global, innovative and sustainable solutions in areas such as climate change, energy, sustainability, trading and innovation.

Our key value is our people. We have offices in six countries, where our interdisciplinary team works for public and private stakeholders, international organizations and non-profit entities.

Our own history and experiences are based on constant innovation. This helps us target our services, by combining academic knowledge, technology and practical experience.

**Hugo Lucas Porta**

Sector  
- Worked for  
governments and  
private sector on  
energy transition  
strategies

# Training Course Material

**This Training is part of Module 6, and focuses on solar projects driven by communities of citizens**

# Overview of the Training

---

- 1. Introduction: Learning Objective**
- 2. Understanding the value chain**
- 3. Main body of presentation**
- 4. Concluding Remarks**
- 5. Further Reading**
- 6. Knowledge Check: Multiple-Choice Questions**

# 1. Introduction: Learning Objective

# Learning Objective

---

## This lecture provides:

1. Knowledge on community power.
2. Characteristics, status and trends of community solar projects.
3. Policy recommendations to foster the role of citizens in the solar revolution.

## 2. Community solar: the role of citizens in the solar revolution

# The role of citizens

---

- NIMBY
- **Consultation**
- **Benefit Sharing (taxes, benefit sharing plan, dedicated funds, equity)**
- **Proactive Participation (consuming, financing; producing)**
- BANANA

# 3. Main Body of Presentation

# Main Body of Presentation

---

## 1 Community (solar) power

## 2 Status and trends of community solar projects

## 3 Policy recommendations

# Community (solar) power

- Community energy is any combination of at least two of the following elements:
  - **Local stakeholders** own the majority or all of a renewable energy project
  - **Voting control** rests with a community-based organization
  - The majority of social and economic **benefits are distributed locally**

## COMMUNITY ENERGY:

BROADENING THE OWNERSHIP  
OF RENEWABLES

# Community (solar) power

Source: SolectEnergy

# Community (solar) power

## Benefits of community driven projects

- **Employment** and income impact tenfold additional employment and income impact compared with non-community-driven projects.
- Increase **social acceptance**.
- Increased **economic resilience** of community members through diversified sources of income.
- Creating a **common identity**, as well increased feeling of self-worth among people involved.

# Community (solar) power

## Benefits of community driven projects

- **Increased transparency** in planning and construction.
- Broader **distribution of assets and influence** within the energy system.
- An **opportunity for indigenous people**.
- **Diversity of actors**, implementation of projects that might not be developed by major actors.
- Local **energy needs are more likely to be met**.
- **Increased pool of funders**: local ownership increases the number of people and available funds for investment.

# Community (solar) power

---

## Implementation Challenges

- Regulatory challenges.
- Financial challenges.
- Unclear legal definition and lack of awareness.
- Cultural barriers.

# Community (solar) power

---

## Common forms of community (solar) projects

- Partnerships.
- Co-operatives.
- Community trusts and foundations.
- Non-profit customer-owned enterprises.
- Housing associations.
- Third party owned.
- Local governments.

### Recently Added Projects

SORT BY	Project Name ▾	Utility ▾	Size ▾	Status ▾	View More
	<b>Good Shepherd Solar Garden</b> Colorado Springs, CO	Pending	500,000 W	Sold Out	<a href="#">View More</a>
	<b>Garfield County Airport</b> Source: Community Solar Hub	Hold	858,000	Sold Out	<a href="#">View</a>

# Main Body of Presentation

---

1 Community (solar) power

**2 Status and trends of community solar projects**

3 Policy recommendations

# Status and Trends

---

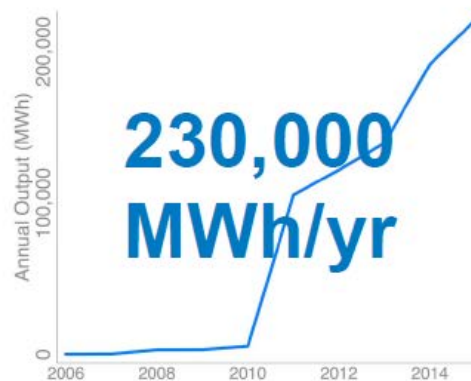

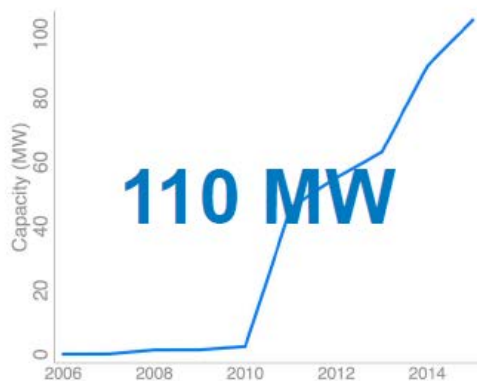

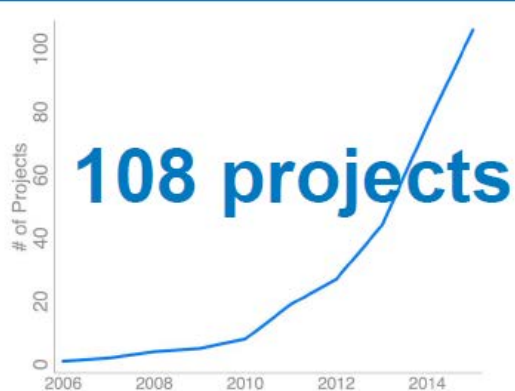

## Difficulties to track Community solar initiatives

- Definition.
- Behind the counter.
- Small.
- No registered.
- Net-metering and net billing programmes.

# Status and Trends - Europe

## Solar Community in Europe

- The new Renewables Directive will also include rights and provisions to support renewable energy communities.
- Member States will also be required to assess the potential and the existing barriers to the development of energy communities.
- To develop frameworks that allow communities to access markets without discrimination and on a level playing field.
- Renewable energy communities will also have a right to set up energy sharing arrangements.

# Status and Trends - Europe

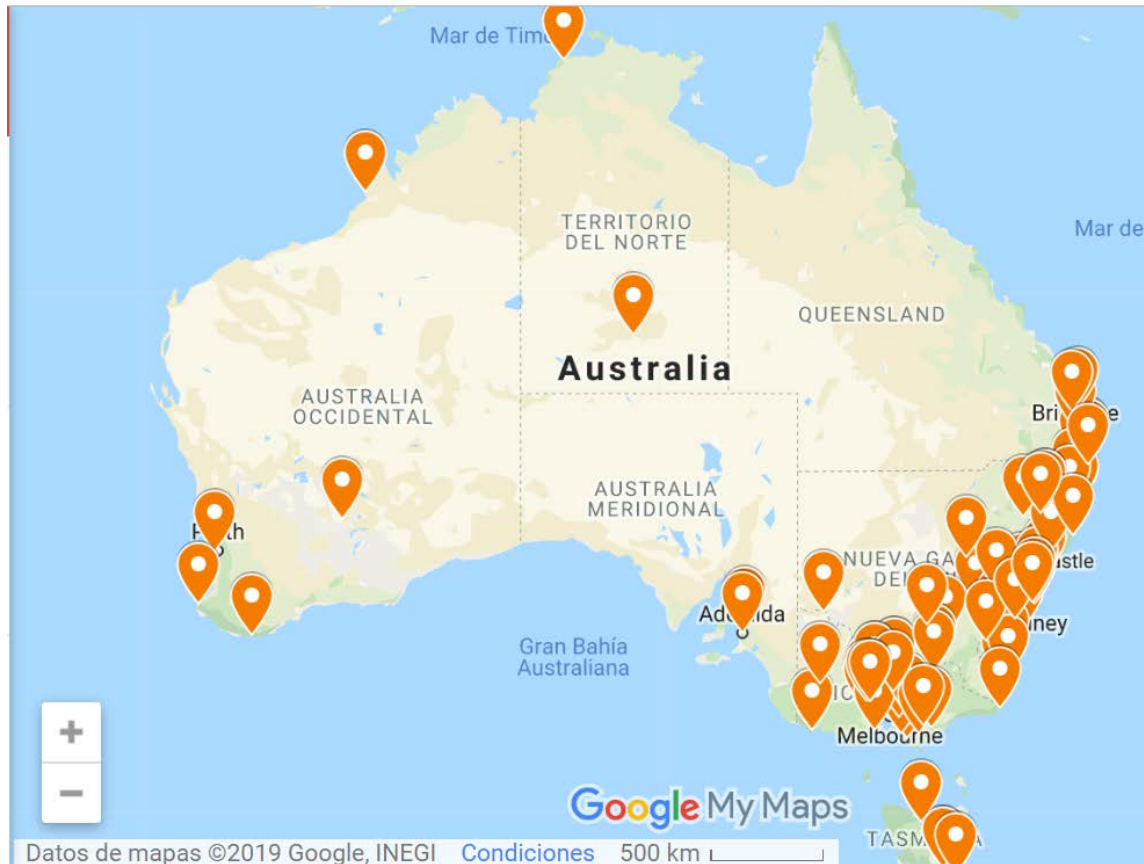

---

## Solar Community in Europe

- Member States will need to ensure citizens that are vulnerable benefit from participating in a renewable energy community.
- Member States must put in place tools to facilitate access to finance and information.

community-wide responses to climate change

### A plan to Repower Australia with 100% renewable energy by 2030

Community Power Agency was proud to launch the Repower Australia Plan. The plan was launched by Community Power Agency's Nicky Ison with world-renowned climate advocate Bill McKibbin and six of Australia's leading climate organisations – 350.org, Australian Conservation Foundation, Environment Victoria, GetUp!, Solar Citizens and the Nature Conservation Council of NSW. Community Power Agency was the lead author of the Repower Australia Plan (Version 2 of the Homegrown Power Plan).

# Community (solar) power

---

## What is the Future of Community Solar?

The sustainable energy transition:

- Decarbonisation;
- Decentralisation;
- Digitalisation;
- Democratization.

# Main Body of Presentation

---

**1 Community (solar) power**

**2 Status and trends of community solar projects**

**3 Policy recommendations**

# Policy Recommendations

---

## Developing a national community energy strategy

- Community energy models,
- Finance and funding,
- Capacity building,
- Profile raising and stakeholder support
- Policy and regulatory reform.

# Policy Recommendations

---

## Legal frameworks and regulation

- Planning regulations;
- Community solar targets;
- Analysis of the barriers to community solar;
- Regulatory measures.

# Policy Recommendations

---

## Finance

- Grants for feasibility studies and access consultancy services;
- Financial support schemes;
- Fiscal incentives;
- Public procurements.

# Policy Recommendations

---

## Expertise and Guidance

- Capacity building workshops;
- Information focal point;
- Capacity building to local civil servants involved in solar community projects;
- Maps.

# Policy Recommendations

---

## Awareness raising

- Communicating the benefits of community;
- Regional assessment of community solar demonstrating that there is potential return on investment;
- Channels to inform citizens.

## 4. Concluding Remarks

# Concluding Remarks

1. Community Solar can not be considered anymore anecdotal but a global movement.
2. The decrease in the cost of the photovoltaic technologies, the increasing awareness of citizens, the development of new business models and the implementation of supportive legal and regulatory frameworks are the reasons behind the exponential growth of Solar Communities in the last years.
2. The Community solar projects bring multiplied benefits to the citizens and the communities that host these projects. Nevertheless they still facing multiple legal, financial, technical and administrative barriers.

# Thank you for your time!
